

ISOCOM Receives AS9100D and ISO9001 Re-Certification for Space and Aerospace Grade Electronic Components

ISOCOM Limited is a leading UK manufacturer of hermetically sealed, optoelectronic and microelectronic components suitable for space, aerospace, and defence applications. ISOCOM has successfully completed AS9100D and ISO9001:2015 certification renewal for a further three years for their new facility in Peterlee, County Durham, United Kingdom.

Their wide range of electronic components are produced in their new 18,000 sq.ft. manufacturing facility. All ISOCOM products are designed, manufactured, and tested in their new clean room facility which has expanded their new part R&D programme and allowed them to continue developing custom solutions for complex specifications.

ISOCOM's talented and highly skilled team of engineers work with both small and large users to create products that meet customers' specifications. This attention to detail has enabled ISOCOM Limited to build a reputation, over thirty years, for long-lasting, highly reliable and radiation hard electronic components.

To renew AS9100D and ISO9001 accreditation, ISOCOM completed an extensive re-certification process which included a full audit of the quality management system to confirm that the system had been maintained and implemented in accordance with the audit standard requirements.

Dr. Arash Bayat, Quality Assurance and Operations Manager, oversees the improvements that are implemented into the quality system to develop space and aerospace grade electronic parts. Regular evaluations and audits ensure that processes, equipment, and personnel are continuously monitored for improvement to achieve their goal of customer satisfaction.

AS9100D and ISO9001:2015 certification is a proactive choice that anticipates the demands of customers and demonstrates commitment to providing first class services and high-quality components for space, aerospace, defence, medical and industrial applications.
